

# Takeda Selects Omada Identity Governance and Administration Solution

Delivered as a managed service in close collaboration with NNIT

**Country:** United States

**Industry:** Pharmaceutical

## Profile:

Takeda is the largest pharmaceutical company in Japan and Asia and a top 15 pharmaceutical company in the world. The company has over 30,000 employees worldwide and is a global supplier of prescription drugs. Headquarter is situated in Japan but the company has sales offices or production sites all over the world, including Denmark and the US.

## Solution:

Omada Identity Suite as a managed service

**As one of the largest, market-leading global pharma companies in the world, Takeda depends on IT-solutions enabling them to strengthen, support, and protect business critical operations.**

Searching for a global solution for identity management and access governance, all vendors in Gartner's Magic Quadrant for Identity Governance and Administration were initially considered. Omada has been positioned in the "challengers" quadrant in 2017, and in March, Takeda selected Omada as their vendor of choice based on solution requirements and ability to deliver.

*"We operate in a highly regulated industry, consequently we only invited the absolute leading vendors in the market. Omada stood out as being able to address all of our requirements with an intuitive user interface. In particular, we support thousands of applications in our organization, and Omada was the only vendor with proven capability to handle unconnected applications and systems," said Matthew Janiszewski, Global Head, Identity & Access Governance, Takeda.*

## Takeda requires overview and flexibility

IT-landscape and governance processes within the pharmaceutical sector are complex, thus the need for overview and flexibility is crucial. Omada Identity Suite offers automation and access governance to support complex operations such as R&D activities in Takeda. The solution offers Takeda an overview of user access and gives them the ability to test and recertify identities. The platform is feature rich, flexible, and easy to deploy using a phased approach. Omada provides both access governance and identity lifecycle management in one single platform and portal, utilizing all Omada developed components without any third party add-ons.

## The need for compliance is crucial

As a global, market-leading pharmaceutical company Takeda maintains the highest level of security in order to be compliant with compliance regulations globally. For this, a detailed overview is important in order to secure continuous compliance. Documentation and validation is crucial. The IT-environment in Takeda involves multiple systems across the organization including R&D, Human Resources, production, etc. Omada helps capture all user and identity data into one system, operated from one single platform.

Omada partners with Danish IT firm NNIT in order to deliver identity management and governance access as a managed service. NNIT will manage the solution and Omada will be responsible for the configuration of the software. NNIT guarantees that customer data and applications are operated and maintained in an environment that is secure and always ready for regulatory inspection, meeting strict regulatory requirements for security, availability, and compliance.

## Short implementation process

Takeda is depending on easy access to a large pool of expert skills with proven experience in the pharmaceutical sector. With Omada, Takeda has access to a team of experts within identity management and access governance that provides professional consulting services. The services cover all aspects of implementing a global identity management and access governance solution – from business case development, to data and role modeling, to technical infrastructure services, a full suite implementation, and post go-live support.

## About Omada Identity Suite

Omada Identity Suite (OIS) provides a comprehensive integrated identity management and access governance solution. Omada's solution empowers enterprises to manage identities across heterogeneous IT systems. The flexibility of the solution allows a high degree of customization via configuration, enabling enterprises to meet business specific requirements. This approach reduces the need for custom development, decreasing deployment time, so ROI is achieved quickly.

## About Omada

Founded in 2000, Omada is a fast-growing, independent IT company with offices in Europe and North America. Omada provides identity management and access governance solutions and services. Omada's innovative product portfolio offers customers an integrated set of core services including identity lifecycle management, compliance control, provisioning, and access risk management.
